## **ENVIRONMENTAL COMPLIANCE TIP**

### Satellite Accumulation Areas

#### **Your (SAA) Satellite Accumulation Area should:**

- ✓ Have waste container contents identified and the container is labeled "Hazardous Waste". (Small 1"x2" fluorescent waste labels may be used for waste stored in original containers.)
- ✓ Waste containers are tightly capped, so they will not leak when tipped.
- ✓ Waste containers not be leaking, rusted, bulging or damaged.
- ✓ Not contain waste that was not created within the room. No waste should be moved from one lab to another lab unless the receiving lab is an EH&S approved 90 day storage area.
- ✓ Provide secondary containment when near sinks or drains that is in good condition. (free of cracks, gaps and impervious to leaks)

**Awareness promotes environmental stewardship... Involvement assures compliance.**
